CONTENTS

Volume 3, Issue Nos 1–6

COMMUNICATIONS IN APPLIED NUMERICAL METHODS

Issue No. 1, January—February 1987

A Method for Infinite Integrals of Oscillating Functions: Y. Zhongjin 1

Some Higher Order Methods for Computing Eigenvalues of Two-point Boundary Value Problems: R. A. Usmani and R. P. Agarwal 5

Evaluation of the Leading Band Coefficients of the Boundary Integral System of Equations: A. I. Sofianos 11

Finite Element Simulation of Recirculating Flows with Heat Transfer: G. F. Polansky, J. P. Lamb and D. E. Klein 17

The Performance of ITPACK on Vector Computers for Solving Large Sparse Linear *Systems Arising in Sample Oil Reservoir Simulation Problems*: T. C. Oppe and D. R. Kincaid 23

An Example of Finite Element Analysis in a Multiply Connected Region: S. Bolkowski and J. Sroka 31

A Network Method for Nonlinear Transient Eddy Current Problems: C. C. Wong 39

On the Accuracy of a Certain Improved Difference Approximation of the Heat *Equation: G. E. Bell* 49

Numerical Treatment of Boundary Conditions at Points Connecting More than Two Electrically Distinct Regions: K. D. Paulsen, D. R. Lynch and J. W. Strohbehn 53

PENT: A Periodic Pentadiagonal Systems Solver: I. M. Navon 63

Use of Double Nodes in the Numerical Simulation of Multilayered Flows of Immiscible Fluids: E. Mitsoulis 71

A Simple Wave Envelope Element Example: P. Bettess 77

BOOK REVIEW 81

CONFERENCE DIARY 82

Issue No. 2, March—April 1987

Patch Test Verification of a Triangular Thin-shell Element Based on Discrete *Kirchhoff Theory: S. S. Murthy and R. H. Gallagher* 83

Weighted Gaussian Methods for Three-dimensional Boundary Element Kernel Integration: M. H. Aliabadi and W. S. Hall 89

Inadmissible Distortion of Solid Elements and Patch Test Results: A. Peano 97

Analysis of the Collocation Time Finite Element Method for the Non-linear Heat Transfer Equation: J. Kujawski 103

A General Mixed Finite Element for Timoshenko Beams: U. Kolberg 109

Some Suggestions for the Finite Element Analysis of Two-dimensional Elasto–Plastic Stress Concentrations: M. Kondo and G. B. Sinclair 115

Exact Singularity Cancelling for the Potential Kernel in the Boundary Element Method: M. H. Aliabadi, W. S. Hall and T. T. Hibbs 123

A Determinant Formalism for Shape Functions: J. P. Ward 129

On the Effect of Natural Damping on the Stability of a Time-stepping Scheme: W. L. Wood 141

A Cost-efficiency Analysis of Boundary Flow Calculations from a Finite Element Solution to Groundwater Flow Problems: R. S. Matthews and W. L. Wood 145

Isoparametric Quadrilaterals and Hexahedrons for Mesh-grading Algorithms: J. M. McDill, J. A. Goldak, A. S. Oddy and M. J. Bibby 155

CONFERENCE DIARY 165

Issue No. 3, May—June 1987

Deforming Finite Elements for the Numerical Solution of the Nonlinear Inverse Heat Conduction Problem: R. C. Mehta and T. Jayachandran 167

A Generalization of Two-dimensional Theories of Laminated Composite Plates: J. N. Reddy 173

A Mixed Time Integration Method for Timoshenko and Mindlin Type Elements: J. P. Wright 181

Tau Method Approximate Solution of High-order Differential Eigenvalue Problems Defined in the Complex Plane, with an Application to Orr–Sommerfeld Stability Equation: K. M. Liu and E. L. Ortiz 187

One-, Two- and Three-grid Extrapolation Methods for a Class of Singular Two-point Boundary Value Problems: E. H. Twizell 195

A Sparse Linear Equations Solver for 3D–Regular Domains: E. A. Lipitakis and D. J. Evans 201

Further Results on the Accuracy of the SS*pj* Algorithms: W. L. Wood 215

Comparison of 3-D Finite Elements for Fluid Flow: M. P. Robichaud and P. A. Tanguy 223

Shallow Shells under Arbitrary Loading: Analysis by the Two-surface Truss Model: F. C. Mbakogu and M. N. Pavlović 235

A Simple Error Estimator in the Finite Element Method: E. Rank and O. C. Zienkiewicz 243

Similar Solutions of the Stefan Problem: P. M. Beckett and G. Poots 251

BOOK REVIEW 255

ANNOUNCEMENT 256

CONFERENCE DIARY 257

Issue No. 4, July—August 1987

The Implementation of Directional Boundary Conditions for Finite Element Computations with Iterative Solvers: P. Devloo 259

Determination of Average Time Constant for Diffusion Processes by Means of the Finite Element Method: A Brykalski 265

Interpolation on the Triangle: S. L. Lee and G. M. Phillips 271

Subminimal Cycle Bases for the Force Method of Structural Analysis: A. Kaveh 277

Dynamic Response of Structures Loaded by a Transverse Wind Force Component: M. S. Causevic 281

Computation of Pressure from the Finite Element Vorticity Stream-function Approximation of the Stokes Problem: Ph. Caussignac 287

A Simple Method to Form Interface Elements in the Heat Transfer Analysis: J. A. Karjalainen 297

Three-field Mixed Approximation and the Plate Bending Problem: O. C. Zienkiewicz and D. Lefebvre 301

An Improved Semi-discrete Approach for the Solution of One-dimensional Linear Boundary-value Problems: W. B. Bickford and R. L. Rankin 311

A Chemically Enhanced Oil Recovery Simulation Benchmark: K. Sepehrnoori, C. K. Mamun and G. A. Pope 315

Concurrent Iterative Solution of Large Finite Element Systems: C. Farhat and E. Wilson 319

On the Computation of Weakly Separated Laminar Flows in a Smoothly Expanding Channel: W. G. Szymczak and G. Myers 327

p-Adaptive Boundary Elements for Three-dimensional Potential Problems: M. Cerrolaza and E. Alarcon 335

Geometrical Properties in the *B*-spline Representation of Arbitrary Domains: P. Rozenthal and M. Gattass 345

Adaptive Grid Refinement Methods for Time-dependent Flow Problems: R. E. Ewing . 351

Issue No. 5, September—October 1987

Microcomputers in Engineering Development and Application of Software

Knowledge Engineering Enhancement of Finite Element Analysis: P. Breitkopf and M. Kleiber 359

Combined Static Analysis and Graphic Software on 16-Bit Microcomputers: W. B. Krätzig and B. Weber 367

Geometrical Nonlinear Limit Load Analysis of Plane Frames: A. Becker, V. Berkhahn, R. Kahn and E. Stein 373

Buckling Analysis on a Microcomputer of Reinforced Concrete Beams Subjected to Axial Loads and Biaxial Bending: C. E. Majorana and R. Vitaliani 381

Nonlinear Beam Element for *R/C* Structures: R. Pöttler and G. A. Swoboda 397

Theory and Numerical Methods for the Modelling of Synthetic Ropes: C. M. Leech 407

Simulation of Industrial Cold Forming Processes: A. A. M. Hussin, P. Hartley, C. E. N. Sturgess and G. W. Rowe 415

Transport of Solid Materials within Storage Basins of River Power Plants: Software Design and Practical Application: R. Heidinger and G. Baumhackl 427

Solution of Some Non-linear One-dimensional Consolidation Problems: H. R. Thomas 435

Non-isothermal Consolidation of Unbounded Porous Media using Mapped Infinite Elements: B. A. Schrefler and L. Simoni 445

Issue No. 6, November—December 1987

Correct Form of the Influence Functions in Elasticity: A. P. Zieliński 453

High Order Finite Difference Schemes to Solve Poisson's Equation in Cylindrical Symmetry: R. C. Mittal and S. Gahlaut 457

Lifting Symmetric Supercritical Airfoils for Wing Design of Combat Aircraft: M. Nandanan and M. A. Ramaswamy 463

Analysis of Air Film in Conveyor Pressurized by Two Parallel Slots: Effect of Tilting of Package Both in Longitudinal and Transverse Directions: C. J. G. Chandra, K. N. Seetharamu and M. A. Parameswaran 469

On the Evaluation of Singular Integrals: S. Vijayakumar and D. E. Cormack 479

FE-solutions are Integral Solutions: F. Hartmann 483

A Note on Applications of Adaptive Finite Elements to Elastohydrodynamic Lubrication Problems: S. R. Wu and J. T. Oden 485

Geometric Sensitivity Analysis with Isoparametric Finite Elements: R. A. Brockman 495

A Numerical Procedure for Electrostatic Problems in a Variable Conductivity Medium: G. Beauquet 501

A Decoupling Procedure for the Modal Analysis of Structures in Contact with Incompressible Fluids: I. Antoniadis and A. Kanarachos 507

Optimum Dynamic Dampers for Single-degree-of-freedom Systems: N. D. Ebrahimi 519

Toward Expert Systems in Finite Element Analysis: G. F. Carey and P. C. Patton 527

A Note on Invertible Two-dimensional Quadratic Finite Element Transformations: M. L. Baart and E. J. Mulder 535

A Note on Plasticity Theory in Matrix Notation: P. Pedersen 541

On the Symmetry of Laminated Composite Rectangular Plates: G. Cheng 547

Pollution Problem of the *p*– and *h*–*p* Versions of the Finite Element Method: I. Babuška and H. S. Oh 553

On Modelling Diffusion-dominated Electrochemical Problems Via FEM: R. L. Sani and A. P. Peskin 563

Modelling of Thermal Diffusion in Three Dimensions by the Transmission Line Matrix Method and the Incorporation of Nonlinear Thermal Properties: S. H. Pulko and P. B. Johns 571

A Note on the Optimum Choice for Penalty Parameters: B. Nour-Omid and P. Wriggers 581

Computation of Interplanetary Hydromagnetic Disturbances in a Synoptic Domain: T. Yeh 587
